

## Photography studio set up

**Light stands:** 60" high, measured to top of the black part of the stand. 48" apart, measured between center poles. See view 1.

**Tripod legs:** 23.5" high, measured along the leg from top to bottom, with the lowest extension poles out ~ 7". Legs all the way apart, center pillar all the way down. See view 2.

**Strobes:** soft box on the left, with light pointed directly at the pot area. Umbrella on the right, with light pointed directly at the pot area.

**Box stand:** Aligned with the long side oriented between the tripod legs so the camera can point directly down at the pot. The pot should be 20" horizontally from the strobe stand center pole. Once the pot stand and the lights are set up, it should be roughly 52" from the light directly to the pot.
